

Human Resources Survey and Data Management

{ The report aims at studying the challenges faced by a particular Human Resource Company, the journey of their digitisation aided by DigiLantern and their current status post the transformation. }

ABOUT

Our client is a start up in the Human Resource space providing an array of services including employment survey, assesment feedback as well as customised feedbacks that require a tailored approach, to mention a few. Today, the company provides end-to-end solutions for all human resources services and beyond, with its key feature being its online delivery model.

CHALLENGES

In the present time, the company provides cost and time effective services online. But this isn't how they always worked. Initially, they operated majorly on manual grounds, recording and maintaining accounts on paper. This prevented them from achieving their maximum efficiency and slowed them down. The main challenge was to introduce the company in the digital space, formulating a mechanism that aides them in managing their Surveys, Reports and other data online and helps them in turning their manual business to an entirely visual one.

OUR APPROACH

Project Planning : As a web solutions providing company, we synchronised ourselves with the client to determine and provide them with exactly what they seeked for an efficient Delivery Process.

Technology Choices: To fully deliver what the Company's business demanded, we at DigiLantern decided to go with a Laravel framework for the website. We also used JQuery, HTML5, MYSQL database, PayU Biz SDK and PDF Module.

Implementation of Solution: DigiLantern's developers put together a web portal concurrent to the client's needs, resutling in an end-to-end online solution provider, with features like online queries and online payment services. DigiLantern helped the company go from being a manual from a totaly virtual one.

ON-GOING ACTIVITIES

We are constantly working towards improving the experience of the end-user and our client. Moreover, we are happy to know that the digitisation of their business has helped the client speed up their work process manifold times.
